Phase changes

Is this water solid, liquid, or gas?

The sea

Glass of water

Cloud

Invisible vapor

Ice cubes

Snow crystals

Leaky faucet

Rain

Puddle

Snowman

Icicles

12.

Activity Kit

GLOSSARY

Condensation nucleus: a fleck of ice or dust that bumps into a water vapor molecule and triggers condensation from invisible vapor (gas) into water (liquid)

Cloud:  a bunch of tiny floating water or ice drops

Crystal: a special symmetrical stack of molecules.  A six-sided snow crystal forms when an invisible water vapor molecule bumps into a fleck of ice or dust at a temperature below 0°C (32°F) and changes by deposition into ice

Frost: ice crystals that form on the ground (e.g. on grass or on a window) by deposition.

Hexagon: A symmetrical six-sided shape, like a stop sign. 

Freezing nucleus: A fleck of ice or dust that bumps into a water droplet and triggers freezing, so the water droplet turns into ice.

Supercooling: occurs when a water droplet is chilled to a sub-freezing temperature (below 0°C or 32°F), but remains liquid because it hasn't bumped into a freezing nucleus

Precipitation: Any form of water – liquid or solid – that falls from the sky to the ground. Precipitation includes:

Snow: Ice crystals that form by deposition.

Rain: Liquid water drops

Sleet: Frozen water drops

Hail: occurs when a frozen rain droplet encounters supercooled water droplets. The frozen rain droplet acts as a freezing nucleus. Supercooled water instantly coats the ice seed with a layer of ice. After many ice layers have built up, the hailstone falls from the sky.

WORD SCRAMBLE:

Unscramble the following words:

NAPTIERAVOO → _____  → 

When water turns from liquid to invisible water vapor (a gas).
(Hint: add heat.)

TIONOCENDSA → _____  → 

When invisible water vapor (a gas) turns to liquid.
(Hint: take away heat.)

TIOPITRECIPAN → _____ 

When water- solid or liquid- falls from the sky to the ground.

SITOPEDION → _____  → 

When invisible water vapor (a gas) turns directly into ice (a solid).
(Hint: take away heat.)

ZINGEREF → _____  → 

When a liquid (for example, water) becomes colder than 0°C (32°F) and turns into a solid (for example, ice).

LIMBUSTIANO → _____  → 

When solid water (ice) turns directly to invisible water vapor (a gas).

GLEMTIN → _____  → 

When a solid (like ice) turns into a liquid (like water).

Answers found in THE SNOW SHOW, on the DELETED SCENES page, under PHASE CHANGES.

SNOW CRYSTAL SHAPES

Identify the snow crystal shapes. Then color in the thermometer to show the temperature ranges in which the snow crystals form.

1. R T

2. L

3. E E

4. L L L

5. N T

6. H L

Answers found in THE SNOW SHOW, on the SNOW CRYSTAL SHAPES chart.

Bonus SNOW CRYSTALS: Identify the snow crystal shapes.

1. LY : composed of several crystals growing in all directions.

2. PP MN

3. BL AR

4. PL T S

5. P T L E

Answers found in THE SNOW SHOW, on BLOOPERS page, under BONUS SNOW CRYSTALS.

6. IA
T :

A polycrystal made up of plates.

7. NG
ND

A polycrystal made up of dendrites.

8. LL

9. RR
Imperfect and broken crystals.

10. ND
ST
The tiniest crystals, also called prisms.

11. CT L

Stellar plates that are divided into wedges, like pieces of pie.

12. TR
YS

ANSWER KEY

Phase changes

1. Liquid
2. Liquid
3. Gas
4. Gas
5. Solid
6. Solid
7. Liquid
8. Liquid
9. Liquid
10. Solid
11. Solid
12. Gas

WORD SCRAMBLE:

- NAPTIERAVOO = EVAPORATION
TIONOCENNSA = CONDENSATION
TIOPITRECIPAN = PRECIPITATION
SITOPEDION = DEPOSITION
ZINGEREF = FREEZING
LIMBUSTIANO = SUBLIMATION
GLEMtin = MELTING

Snow CRYSTAL SHAPES

1. STELLAR DENDRITES
-2°C, -15°C
2. COLUMNS
-5°C to -8°C, < -22°C
3. NEEDLES
-5°C
4. STELLAR PLATES
-2°C, -15°C
5. THIN PLATES
-2°C, -10°C to -22°C
6. THICK PLATES
< -10°C

Bonus SNOW CRYSTALS:

1. POLYCRYSTALS
2. CAPPED COLUMNS
3. DOUBLE STARS
4. SPLIT STARS
5. SPLIT PLATES
6. RADIATING PLATES
7. RADIATING DENDRITES
8. BULLETS
9. IRREGULARS
10. DIAMOND DUST
11. SECTORED PLATES
12. TRIANGULAR CRYSTALS
